PRODUCT REQUIREMENTS DOCUMENT · PROTOTYPE V1.0

LearnAI — AI Micro-Learning Platform

Personalised AI upskilling for tech & non-tech professionals, in a freemium model

Author: Daksh Paleria

Date: April 2025

Status: Prototype Complete

Format: Web SPA · Deployable on GitHub Pages

1 · PROBLEM STATEMENT

AI is reshaping every profession — yet most learning platforms serve only one audience: developers or data scientists. Non-tech professionals (marketers, HR, finance, ops) are left out, while tech professionals lack a structured path to move from general coding to AI-specific engineering.

> **The Gap:** Existing platforms (Coursera, Udemy, Scaler) are either too generic, too long-form, or too technical. No product has built personalised, micro-format AI learning across both tech and non-tech cohorts in a single freemium experience.

The result: professionals know AI is important, but don't know *where to start for their specific role* — and drop off before forming a learning habit.

2 · WHAT WE BUILT

A fully clickable web prototype of **LearnAI** — a freemium AI micro-learning platform. Built in vanilla HTML/CSS/JS, deployable to GitHub Pages with no build step. The prototype covers the complete user journey across 6 views:

🏠 Landing Page

Hero with dual-track messaging (tech & non-tech), cohort cards, "How It Works," testimonials, and freemium tier comparison.

🧭 Onboarding (3 steps)

Role type selector (tech/non-tech) + free-text role input with suggestion chips → AI level → Goal. Cohort is inferred dynamically.

📚 Dashboard

Personalised path for the user's role with a context card, progress bar, module list, paywall banner, and upgrade sidebar.

🎬 Lesson Player

Video player UI, Notes/Quiz/Discuss tabs, lesson outline sidebar, key concept tags, and next-lesson CTA.

💳 Pricing Page

Free/Pro/Pro+ plans with monthly/annual toggle, feature comparison, and FAQ. Upgrade modal

📊 Metrics Dashboard

North star KPIs, animated acquisition funnel, cohort breakdown, conversion by cohort, and freemium

triggered on locked content.

model summary.

3 · TARGET AUDIENCE — 4 COHORTS

🎓 Fresh Graduate 💻 Coding

Path: AI Career Launchpad · Timeline: 90 days

CS/non-CS graduates who want to land their first AI/ML role. Need: portfolio projects, interview prep, and structured Python/ML path.

⚡ Working Professional 🚫 No Code

Path: AI Power User · Timeline: 4–6 weeks

Marketing, HR, Finance, Ops professionals who want to 10× productivity with AI tools. Need: practical tools, zero jargon, no code.

🔄 Career Switcher 💻 Coding

Path: AI Engineering Transition · Timeline: 12 weeks

Developers, analysts, and data professionals moving into AI Engineering. Need: LLM APIs, RAG, MLOps, system design.

🚀 Entrepreneur 🚫 No Code

Path: AI Business Builder · Timeline: 30 days

Founders and solo builders who want to ship and monetise AI products. Need: no-code MVPs, pricing strategy, go-to-market.

Key differentiation: Role type (tech vs non-tech) is selected at onboarding step 1. The user types their actual role (e.g. "Marketing Manager"), and the platform infers their cohort automatically — no manual course browsing required.

4 · FREEMIUM MODEL DESIGN

Designed from a PM-first perspective: the free tier must feel *complete*, not crippled. The paywall is placed at the precise point where the next meaningful outcome begins.

🆓 **Free — Build the Habit**

Complete Module 1 of your cohort path. Skill assessment, streak/XP gamification, read-only community, full path visibility. **Paywall: start of Module 2.**

⚡ **Pro — ₹1,499/mo · Land the Outcome**

Full course library, weekly live mentor sessions, verified certificate (200+ hirers), job board (500+ roles), community write access. **7-day free trial, no card needed.**

🏆 **Pro+ — ₹4,099/mo · Guarantee the Result**

Everything in Pro + 4× monthly 1:1 mentorship, portfolio & resume review, mock interviews, priority job referrals, and **placement guarantee** (or 3-month refund).

Upgrade Triggers (built into UI)

- **Locked lesson click** → upgrade modal with social proof ("847 learners upgraded this month") and outcome copy ("3× more likely to hit your goal")
- **Paywall banner** between Module 1 and Module 2 in the dashboard
- **Sidebar upgrade card** — outcome-led copy specific to the user's cohort and role
- **Module 3+ engagement** → Pro+ upsell trigger
- **Lesson Player — Discuss tab** → locked behind Pro to drive community value

5 · PERSONALISATION ENGINE

The platform dynamically personalises content, copy, and module prioritisation based on three onboarding inputs: **role type → specific role → AI level → goal.**

INPUT	HOW IT'S USED
Tech / Non-Tech toggle	Narrows suggestion chips; infers base cohort (tech → switcher/grad, non-tech → nontech/entrepreneur)
Typed role (e.g. "Marketing Manager")	Keyword-matched to role context map — sets personalised "why this path" card and highlights 2 recommended modules with 🎯 badge
AI level (beginner → builder)	Sets starting module and lesson difficulty signal
Goal (job / upskill / freelance / product)	Informs sidebar outcome copy and upgrade trigger messaging

6 · CORE METRICS

North Star Metrics

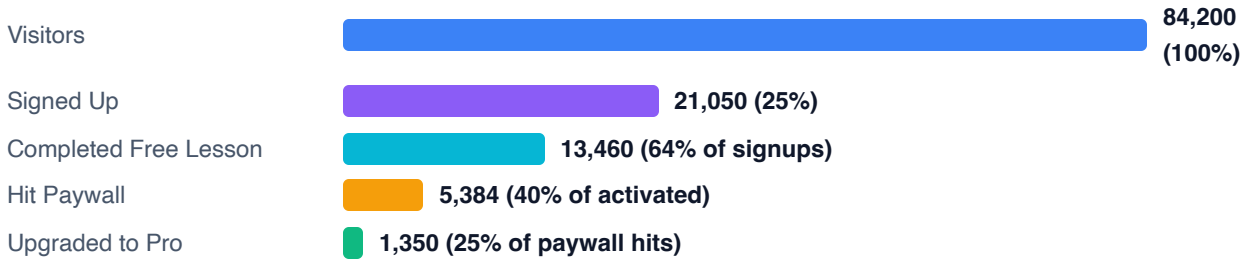
⚡ Weekly Active Learners (WAL)

Users completing ≥1 lesson/week. Measures engagement and content quality. **Current: 12,480 · Target: 50K by Q4.**

💎 Free → Paid Conversion Rate

% of free users upgrading within 30 days of first paywall hit. Measures freemium model health. **Current: 6.4% · Industry benchmark: 3–5%.**

Acquisition Funnel



Supporting Metrics

📉 Monthly Churn

3.1% (↓ 0.4pp MoM). Target: <2.5% by Q3.

📚 Lessons / Week / User

4.2 avg (↑ 0.6 MoM). Target: 5+ for habit lock-in.

🏆 Cohort Conversion

Career Switcher 8.2% · Non-Tech 5.8% · Entrepreneur 5.1% · Graduate 4.3%

7 · TECH STACK & DEPLOYMENT

Stack: Vanilla HTML + CSS + JavaScript. No framework, no build step, no dependencies. Deploys to GitHub Pages in under 2 minutes.

Files: `index.html` (SPA shell, 6 views) · `styles.css` (design system, ~1,300 lines) · `app.js` (router, state, render functions) · `data.js` (courses, plans, role context maps)

> **Why vanilla?** Speed of prototyping and zero infrastructure overhead. A production build would migrate to Next.js + Supabase (auth, progress tracking) + Stripe (payments).
